Top Systems London Limited Data Center Solutions & Services Offices in UK, Europe & UAE

Innovative infrastructure powering efficient data management

Company Overview

Specialized IT Services

The company delivers high-performance, secure, and scalable IT infrastructure and data center solutions for enterprises and government.

Comprehensive Service Portfolio

Offers data center services, remote hands support, hardware maintenance, and structured cabling solutions to optimize operations.

Strategic Regional Presence

Operating in United Kingdom, Europe & United Arab Emirates, the company is a trusted IT partner for UK, Europe and Middle East organizations seeking reliability and efficiency.

Commitment to Excellence

Combines technical expertise, proactive support, and sustainability to ensure optimized performance and long-term client value.

Data Center Services

Secure Colocation Facilities

Colocation services provide a secure environment for hosting servers and networking equipment with optimal performance.
Advanced Infrastructure Systems

Cooling systems, redundant power, and robust network connectivity ensure uninterrupted data center operations.

24/7 Monitoring and Maintenance

Continuous monitoring and proactive maintenance reduce outages and improve overall efficiency.

Energy-Efficient Technologies

Integration of energy-efficient solutions minimizes environmental impact while delivering superior service quality.

Smart Hands
On-site Technical Assistance

Remote Hands services provide expert on-site support for routine and emergency technical tasks at data centers.

24/7 Skilled Technicians

Skilled technicians available around the clock ensure rapid response and reduce downtime for critical systems.

Reliable Infrastructure Maintenance

Remote Hands services maintain infrastructure precisely and reliably following best practices and client specifications.

Hardware Support and Break fixes

Comprehensive Hardware Services

Services include diagnosis, repair, and replacement of faulty hardware to quickly restore system functionality.
Expert Technician Intervention

Skilled technicians handle diverse hardware issues including server and network device failures efficiently.

Minimizing Downtime

Rapid response and effective solutions minimize downtime, ensuring continuous business operations.

Preventive Maintenance

Proactive maintenance programs detect potential issues early, reducing unexpected failures and extending hardware lifespan.
Hands on

Physical Installation Process

Rack & Stack involves unpacking, mounting, and connecting servers, storage, and networking hardware in data centers.

Best Practices Ensured

Proper airflow, cable management, and accessibility are ensured to optimize system performance and maintenance.

Benefits of Outsourcing

Outsourcing Rack & Stack accelerates deployment timelines and reduces risks linked to improper installations.

Rack & Stack

Structured Cabling

Efficient Network Connectivity

Structured cabling ensures organized and efficient connectivity for data centers and enterprise networks.

### Fiber Optic and Copper Cabling

Services include installation of fiber optic and copper cabling to support high-speed data transmission.

Reduced Interference and Reliability

Proper cabling reduces signal interference, enhances reliability, and simplifies troubleshooting.

Compliance and Future-Proofing

Adherence to international standards ensures compliance and future-proof network infrastructure.

Project Management

Comprehensive Project Management

Top Systems Services delivers end-to-end management including planning, resource allocation, and vendor coordination.
Quality and Risk Management

Services include feasibility studies, risk assessments, and quality assurance to ensure successful project outcomes.

Agile Methodologies and Transparency

The company adopts agile methods and transparent communication for full client visibility and control.

Efficient Infrastructure Deployment

Structured approach reduces risks and enhances efficiency for complex data center and network implementations.

Get in Touch

Multiple Contact Channels

Clients can reach the company via email, phone, and website for inquiries and service requests.
